

ABSTRACT OF THE DISCLOSURE

A pen (1) suitable for writing and/or typing on screens and/or keyboards of electronic equipment such as computers, personal organizers, palmtops, telephones or the like is described, said pen comprising an elongated stem (2) provided at at least one end (2e) with a coaxial cavity (3) able to house and retain inside it a rounded tip (4). In the pen (1) in question this tip (4) is made of a material chosen from a group comprising synthetic or natural hard stones and ceramic materials.
